

AI, Data & Software Delivery

Service delivery designed around your organizational priorities.

YOUR CHALLENGE

Disconnected information, inconsistent definitions, and manual handoffs make it harder to deliver reliable services. New tools must fit the organization's workflows and operating requirements.

YOUR ORGANIZATIONAL GAIN

Improve access to consistent information, reduce avoidable manual handling, and equip teams with usable tools supported by clear ownership.

WHAT YOU RECEIVE

Integrated datasets, metric definitions, and data quality controls. Applications and automation with test evidence and operating documentation. Tested AI assistants where scoped, plus HR and human capital IT integration and support.

INPUTS WE NEED

Approved use cases, source definitions, access permissions, technical contacts, and acceptance requirements.

HOW DELIVERY WORKS

Your technical and business owners approve requirements, environments, and data access. We demonstrate increments, resolve agreed defects, and complete acceptance and handover before production use.

HOW PROGRESS IS MEASURED

Measures may include data completeness, reconciliation exceptions, refresh reliability, task completion, and support demand. AI evaluations include answer quality, access boundaries, unsupported responses, and human review requirements.

WAYS TO ENGAGE

Purchase a defined data or software work package, integrate delivery into ONE Transform, or scope maintenance through ONE Sustain. Licenses, hosting, third-party charges, and service coverage are specified separately.
